DETAILED ACTION

Allowable Subject Matter

1. Claims 15-16, 19-22, 25-26, 29-30, and 33-37 (now amended 1-15) are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: Lee et al. (Signal Processing Publication, incorporated by reference) disclose a method for enhancing noise-corrupted speech signal in that speech signal is estimated from input noisy speech signal. Estimation-maximization (EM) approach is utilized to recursively compute for maximum likelihood (ML) estimation. Result of the estimation is fed into a Kalman filter to produce enhancing clean speech signal (referring to reference). Johnson also teaches a method for enhancing noise-corrupted speech signal in that input noisy speech signal is preprocessed and fast Fourier transformed. A voice activity detector determines speech/non-speech signal. A smoothed Wiener filter of the noise suppression device filters the data frames. The noise suppression device modifies magnitude of the time domain data based on the voicing information. Both Lee et al. and Johnson fail to specifically disclose the steps of estimating a non-Gaussian distribution function model for the clean speech signal, dynamically updating the non-Gaussian distribution function model, producing a gain function utilizing the non-Gaussian distribution model, applying the gain function model to the input signal spectral bands, and combining the spectral bands to produce a clean speech signal. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify Lee et al. and/or Johnson in order to obtain the claimed invention. Therefore, claims 15-16, 19-22, 25-26, 29-30, and 33-37 (now amended 1-15) are allowed over prior art of record.
